                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         248
                                                                                                     FUNCTION: SPECIFIC RECEPTOR FOR THE SIDEROPHORES FERRIC PSEUDOBACTIN BNB AND FERRIC PSEUDOBACTIN BN7, IRON CHELATING PSEUDOBACTIN BN7, IRON CHELATING PSEUDOBACTIN BN7, IRON CHELATING PSEUDOBACTIN BN7, IRON FROM THE ENVIRONMENT, SPECIALLY UNDER IRON-RESTRICTED CONDITIONS.
SUBCELLULAR LOCATION: Outer membrane.
SUBCELLULAR LOCATION: Outer membrane.
INDUCTION: BY IRON LIMITATION IN ADDITION TO THE PRESENCE OF OF THE TWO COGNATE PSEUDOBACTINS BNB OR BN7.
SIMILARITY: LOCAL TO OTHER TONB-DEPENDENT RECEPTOR PROTEINS.
                                                                                                                                                                                                                                                          Microbiol.

"Crystal structure of the antibiotic albomycin in complex with outer membrane transporter FhuA.";

Protein Sci. 9:956-963 (2000).

-I- FUNCTION: THIS RECEPTOR BINDS THE FERRICHROME-IRON LIGAND.

INTERACTS WITH THE TONB PROTEIN, WHICH IS RESPONSIBLE FOR E COUPLING OF THE FERRICHROME-PROMOTED IRON TRANSPORT SYSTEM.

AS A RECEPTOR FOR BACCTERIOPHAGE T5 AS WELL AS T1, PHI80 AND COLICIN M. BINDING OF T5 TRIGGERS THE OPENING OF A HIGH CONDUCTANCE ION CHANNEL. CAN ALSO TRANSPORT THE ANTIBIOTIC
                                                                                                                                                                                                                               Ferguson
